

Department of Commerce Safety Report

February 2003

Safety Report February 2003

Introduction

This report provides an update to Department of Commerce (DOC) managers and employees on the progress of Departmental safety initiatives and information regarding important Department-wide safety issues for February 2003. The report also contains the latest available accident data for the Department. Section One of the report, Program Initiatives, provides updates on the safety initiatives outlined in the Safety Program Plan available at <http://ohrm.doc.gov/safetyprogram/safety.htm>. Section Two, Significant Safety Issues, outlines safety issues and concerns which arose in February 2003. Section Three, Injury Statistics, provides statistics regarding Department injuries, as reported to the Workers' Compensation Program for January 2003, and an analysis of the data to assist bureaus in focusing their safety efforts. Section Four, Survey Results, provides the February results from the on-line survey available through the intranet Occupational Safety and Health (OSH) Program Web Site.

Section One: Program Initiatives

Metropolitan Washington Federal Safety and Health Council

The Department of Commerce is committed to supporting the safety and health community through participation in focus groups and councils that promote safety awareness and address key safety issues. In fact, our commitment and actions were recently recognized formally at a ceremony hosted by the Metropolitan Washington Federal Safety and Health Council for our outstanding support of the Council in 2002. In 2003, we will continue our efforts to maintain effective working relationships with other government and non-government entities.

Safety Inspections at HCHB and Silver Spring

Comprehensive safety and health inspections are planned for the Herbert C. Hoover Building (HCHB) and the National Oceanic and Atmospheric Administration (NOAA) Silver Spring Metro Center facilities. The inspections are scheduled for March 3-7, 2003, and are being coordinated by the Commerce Office of Occupational Safety and Health and the NOAA Environmental Compliance and Safety Division. Inspections of *all* work spaces, including offices, in the buildings will be performed. Inspectors will look for cords stretched across aisles, torn carpeting, overloaded electrical circuits, and other problems.

To ensure the inspections are conducted in an orderly and efficient manner, a point of contact must be designated by each operating unit. The contact will accompany the inspection team, provide information about office operations, and access to areas occupied by their unit.

Section Two: Significant Safety Issues

Slips and Falls: As reported previously, slips and falls account for most of the injuries in Commerce. December and January were no exceptions, when over 20 employees were injured due to slips and falls. In most cases, employees slipped on icy sidewalks and wet floors. The injuries included sprained ankles and backs, a hyper-extended knee, and various cuts and bruises. Avoiding icy sidewalks and wet floors, when possible, wearing proper shoes, marking wet floors, and cleaning up spills quickly can reduce those injuries.

Section Three: Injury Statistics and Analysis

This section provides information on the total number of Departmental injuries for the past five years, and analyzes the types of injuries across the Department. The information below reflects January 2003 statistics. Due to late submissions, processing limitations, and to ensure the accuracy of the information, this section will continue to include information up to the previous month. The data presented in the charts and tables are based upon Departmental Workers' Compensation Program records.

Incidence Rate: The incidence rate (IR) represents the number of injuries and illnesses per 100 full-time workers and is calculated as follows:

$$IR = \frac{N}{EH} (200,000)$$

N	=	Number of injuries and illnesses
EH	=	Total hours worked by all employees during the year ¹
200,000	=	Base for 100 equivalent full-time workers (40 hours per week, 50 weeks per year)

¹ The total hours worked were determined based on the total number of employees and the average hours.

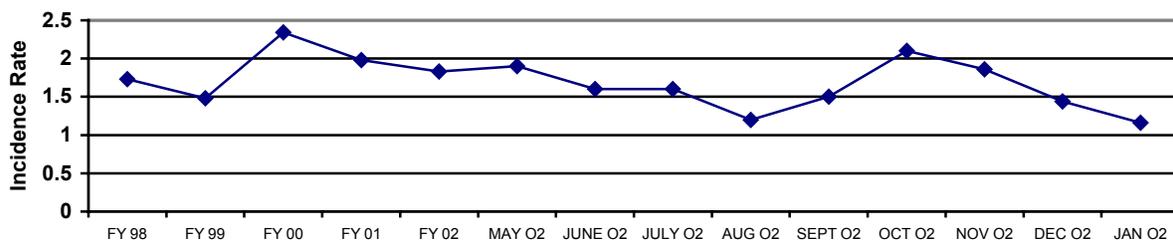

The Commerce Workers' Compensation Program keeps records on all injury and illness claims, including those that did not include any lost work time. An accounting of all incidents allows follow-up and more comprehensive program review by safety representatives. However, the incident rates from those records are not directly comparable to industry trends, since they include many minor injuries and illnesses that are not considered "work-related" under Occupational Safety and Health Administration (OSHA) standards for private industry. An OSHA recordable incident is a work-related injury or illness that resulted in one or more of the following: medical treatment beyond first aid, a significant injury or illness diagnosed by a

physician or other licensed health care professional, days away from work, restricted work or transfer to another job, loss of consciousness, or death.

For comparative purposes, table 1A, included as page nine of this report, provides data that more closely correspond to the recordable injury criteria. The remaining tables and charts include data for all cases submitted to the Workers' Compensation Program.

Chart 1

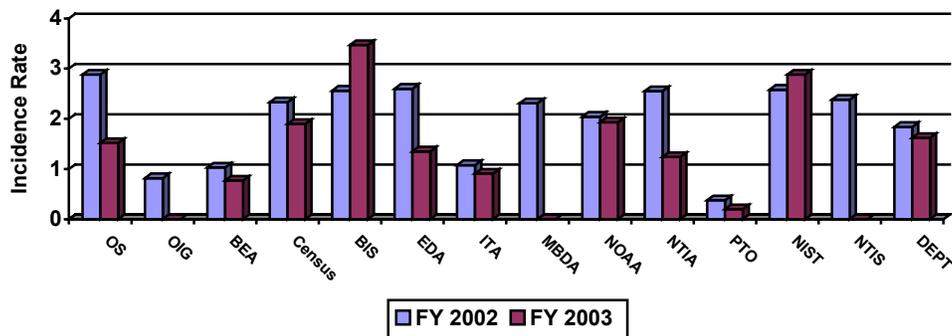

Total Case Incidence Rate Trend

Major Findings include:

- **The FY 2003 Total Case Incidence Rate (TCIR) for Commerce is down from FY 2002 and FY 2001.** The TCIR is 1.61 for FY 2003, 1.84 for FY 2002, and 1.98 for FY 2001. The incident rate of 1.16 for January 2003 is the lowest monthly level in two years and significantly lower than the January 2002 incident rate of 2.38. A total of 183 Workers' Compensation claims were submitted thus far for FY 2003.
- **Of the larger bureaus, the TCIRs for FY 2003 are equivalent to or lower than the rates for FY 2002 (see table 1 and chart 2).** The TCIR for the Office of the Secretary is down significantly, 47 percent, from FY 2002.
- **Of the smaller bureaus (i.e., bureaus with less than 500 employees), the Bureau of Industry and Security (BIS) and the Technology Administration (not shown) have higher TCIRs for FY 2003 when compared to FY 2002.** Four BIS employees were injured in FY 2003. One BIS employee was injured during training at the Federal Law Enforcement Training Center, two employees were injured in automobile accidents, and one employee fell off a loading dock. The Technology Administration (TA) did not have a single injury from FY 1998 to FY 2002. One TA employee was injured in October 2002, resulting in a current injury rate of 7.75.

Chart 2

- **The Total Recordable Case Incidence Rate (TRCIR) for Commerce is down from previous years.** The TRCIRs for Commerce are 1.31 for FY 2003, 1.60 in FY 2002, and 1.72 in FY 2001.

Types of Injuries: Many of the injuries reported can be prevented through improved safety awareness and proper maintenance. A Departmental and bureau focus on eliminating injuries and illnesses is essential. Eliminating injuries and illnesses can be accomplished by evaluating the types of claims submitted and structuring safety awareness training programs to eliminate accidents. Information on types of injuries is provided in charts 4 and 5, and tables 2 and 2A.

Key findings are explained below:

- **“Slips/Falls” continue to be the most prevalent type of injury.** “Slips/falls” accounted for 36 percent of all injuries within the Department for FY 2002 and for 43 percent in January 2003. More attention must be given to walking surfaces to reduce injuries from slips and falls. Floors that are wet from mopping must have highly visible warning signs, so employees know to avoid those areas. Trips from cords strung across floors continue to cause injuries. Telephone lines, electrical cords, and other cords should be routed away from walking areas.
- **“Struck and Contact” injuries were second in frequency for January 2003.** These injuries combined for 21 percent of those reported for FY 2002, and 24 percent for January 2003. A majority of the injuries were caused when employees struck open drawers, doors, or low overhead clearances. Those injuries can be avoided by closing drawers that are not being used. Employees should also be aware of their surroundings and use caution. Low overhead clearances should be marked with highly visible paint or tape.

- **“Exertion” injuries remain a concern.** “Exertion” injuries were 20 percent and 18 percent of total injuries for FY 2002 and January 2003, respectively. To prevent back injuries, employees should use carts to move objects, and avoid carrying them by hand. The proper lifting technique includes keeping the back straight and lifting with the legs. For jobs that require repetitive motion, an ergonomics assessment should be conducted.
- **“Exposures” were evident as well.** Exposures accounted for five percent of the injuries or illnesses reported in FY 2002. However, no exposure illnesses were reported in January 2003. Most exposure illnesses can be prevented through proper ventilation and use of personal protective equipment.

Section Four: Survey Results

We continue to receive comments through the Safety Survey Web Site. We are using employee comments to help shape a safety program responsive to employee issues and concerns. The Web Site can be accessed through the Office of Human Resources Management Homepage at <http://ohrm.doc.gov/>.

During the month of February, we received 45 responses through the Web Site survey. The next Newsletter will provide details on some of the comments received and how we are addressing them. The Newsletter will be available on the OSH Program Web Site.

Safety Survey Statistics

The following tables provide some data regarding the distribution of responses by bureau and general geographical area, as well as general safety impressions.

**Safety Survey
February Results**

Have you experienced a safety lapse in your work area during the past 3 months?		
Answer	Count	Percent
No	34	76%
Yes	11	24%

Have you noticed any safety improvements in your work area or in the Department as a whole during the past 3 months?		
Answer	Count	Percent
No	30	67%
Yes	14	31%
No Answer	1	2%
